About me

I am a curious and proactive developer with 4+ years of experience building useful software solutions. I enjoy learning, solving complex problems and turning business needs into structured, scalable systems that create real value.

Interests

I want to work in a company that always faces new challenges, so I can grow professionally and personally. I would like to be part of a collaborative team that values communication, ownership, continuous improvement and good development practices.

Experience

Full Stack Developer | IPAB

Nov 2024 – Present

- Defined architecture and backend structure.
- Designed workflows for institutional information queries.
- Enabled secure financial dashboard visualization.
- Implemented secure access and permissions.
- Built modules for uploads and repository management.
- Developed dynamic query and export features.
- Improved internal data consultation processes.
- Supported code review and module validation.
- Followed up development tasks within the team.

Tools: JavaScript, TypeScript, Node.js, ReactJs, NestJs, SQL Server, Power BI.

Full Stack Developer | CTS

Apr 2023 – Nov 2024

- Maintained and improved public sector systems.
- Built new modules for existing web platforms.
- Integrated frontend and backend services.
- Improved application performance.
- Enhanced authentication flows.
- Improved user experience across systems.
- Refactored features to improve maintainability.
- Fixed bugs in production and legacy modules.
- Supported code quality and technical reviews.
- Contributed to security alignment improvements.

Tools: JavaScript, TypeScript, C#, Angular, .NET, SQL Server.

Full Stack Developer | Ceredent

Jul 2020 – Mar 2023

- Built a mobile app for dental office operations.
- Implemented schedules, forms and validations.
- Integrated API consumption and state management.
- Developed backend authentication.
- Built data persistence with PostgreSQL.
- Added secure local storage for sensitive data.
- Improved appointment and patient data flows.
- Structured mobile navigation with Expo Router.
- Applied validation rules to improve data capture.

Tools: JavaScript, TypeScript, NestJS, React Native, PostgreSQL.
