About me

I am a curious and proactive developer with 5+ years of experience building useful software solutions. I enjoy learning, solving complex problems and turning business needs into structured, scalable systems that create real value.

Interests

I want to work in a company that always faces new challenges, so I can grow professionally and personally. I would like to be part of a collaborative team that values communication, ownership, continuous improvement and good development practices.

Experience

Fullstack Engineer | IPAB

Nov 2024 – Present

- Developed full-stack modules for institutional financial systems.
- Defined backend structure, secure workflows and role-based access for financial information queries.
- Built upload, repository, dashboard visualization and large-volume data export features.
- Improved reliability, validation and performance of internal data consultation processes.
- Supported production troubleshooting, module validation, issue resolution and CI/CD practices.
- Developed reusable backend services and frontend components to support financial reporting workflows.
- Supported containerized application delivery and deployment workflows using Docker and Kubernetes.

Tools: TypeScript, JavaScript, C#, Node.js, NestJS, React, Angular, SQL Server, Power BI, Azure, CI/CD, Docker, Kubernetes.

Fullstack Engineer | CTS

Apr 2023 – Nov 2024

- Maintained and improved production systems for public sector environments.
- Integrated frontend applications with backend services, APIs and relational databases.
- Improved performance, authentication flows, maintainability and system reliability.
- Refactored legacy features and fixed production issues in business-critical modules.
- Developed backend services and database queries to support secure operational workflows.
- Collaborated on technical validations to improve stability before production releases.

Tools: TypeScript, JavaScript, C#, .NET, NestJS, React, Angular, SQL Server, Azure, CI/CD.

Fullstack Developer | CEREDENT

Jul 2021 – Mar 2023

- Helped improve and develop internal projects for dental office operations.
- Implemented appointment scheduling, patient forms, validations and operational workflows.
- Integrated frontend screens with backend APIs, authentication and state management.
- Designed data persistence for patient, appointment and operational records.
- Supported feature stabilization, bug fixing, troubleshooting and application improvements.

Tools: TypeScript, JavaScript, NestJS, Angular, React, PostgreSQL, REST APIs.
